

HOANG THAI ANH

AI Engineer

 hgthaianh |  hgthaianh |  hoangthaianh397@gmail.com |  0886927460

OBJECTIVE

AI Engineer with hands-on experience building RAG-based assistants, and ML systems for real-world applications. Worked on document understanding with VLMs, graph-based recommendation, and OCR, NLP research. Seeking entry-level AI Engineer roles focused on applied LLM systems, intelligent automation, and production-ready AI products.

EXPERIENCE

TMA Solutions

Ho Chi Minh City, Vietnam

AI Engineer Intern

Dec 2025 – Mar 2026

- Benchmarked OCR frameworks (ChandraOCR, Qwen-VL) with quantized models, identifying trade-offs between model capacity and structured extraction performance.
- Designed evaluation metrics for structured outputs (JSON/HTML), improving consistency in accuracy measurement across diverse document layouts.
- Built automated evaluation pipelines to compare inference modes, enabling systematic performance analysis on curated scan datasets.

PROJECTS AND PUBLICATIONS

OmniRestaurant: AI-Powered Recommendation & Agent System

Jan 2026 – Present

Role: AI Engineer | Team size: 3

- Built a RAG-based conversational system to improve response accuracy using external knowledge sources.
- Designed an agent-based architecture for multi-step reasoning and dynamic user interaction handling.
- Integrated RAG with autonomous agents to deliver context-aware and personalized recommendations.

ViCoHATE: Context-Aware Dataset for Hate Speech Detection

Sep 2025 – Jan 2026

Accepted and Presented at the FJCAI 2026 Conference

- Built an end-to-end pipeline to construct a 10K-sample context-aware dataset from Reddit with hierarchical annotations.
- Developed a multi-task learning model (PhoBERT) for joint hate speech and stance detection, reducing contextual misclassification.
- Applied data denoising strategies to resolve label conflicts and improve class separation.
- Achieved 64.20% F1 on the minority Hate class and improved precision by 6.75% over baseline models.
- Published and presented findings at FJCAI 2026.

TECHNICAL SKILLS

Core AI/ML:	PyTorch, Transformers, RAG, Fine-tuning, VLMs
Programming:	Python, SQL, C/C++, Bash
Data & Analysis:	Pandas, NumPy, Matplotlib
Backend & Serving:	FastAPI, REST APIs, SSE
Data & Infra:	PostgreSQL, MongoDB, Docker, Git

CERTIFICATES

- TOEIC: 725/990
- Machine Learning Specialization – DeepLearning.AI, Coursera (2025)

HONORS & AWARDS

• Consolation Prize – IT Got Talent	Jan 2026
• Consolation Prize – Vietnamese Informatics Olympiad FOSS	Dec 2025
• Finalist – HDBank Hackathon	Sep 2025

EDUCATION

2022 – 2026	Bachelor of Information Technology, HUTECH	GPA: 3.32/4.0
